Non-Binary Low-Density Parity-Check Codes 00000000 0000000 Non-Binary Polar Codes

Conclusion 0000 References

Brief Context and Objective

- This thesis is a part of the Quasi Cyclic Small Packet (QCSP)¹ project.
- QCSP Project: Association of non-binary codes with Cyclic-Code Shift Keying (CCSK)² for self-synchronization and identification waveforms for IoT networks.
- CCSK is a low-rate non-binary modulation of rate $r = \frac{\log_2(q)}{q}$ where q is field order.
- Thesis role: investigates non-binary decoders and aims to optimize their decoding algorithms.

References

Error Control Codes I

- Shannon³ proved that reliable communication is possible.
- Since then, plenty of error correction codes have been proposed.
- In general, an error correction code receives an information block of length K and encodes it to generate a codeword of length N by introducing M = N K redundant symbols.

NB-LDPC Conclusion

- The Best, the Requested, and the Default algorithm is proposed for NB-LDPC decoders.
- Reduces communication load by allowing exchange of a priori information.
- Implemented using different algorithms
 - Trellis EMS.
 - FB-EMS.
 - SYN-EMS.
- Also, used presorting to further reduce the internal processing of the EMS-based CN.

Introduction to Non-Binary Polar Codes

- Latest error correction code proposed by E. Arikan in 2009¹⁰.
- Encodes message of size K into a codeword of size N.
- Relies on channel polarization.
- Physical channel transformed into N virtual channels.
- Virtual channels are polarized into either noiseless or extremely noisy channels.

¹⁰E. Arikan, "Channel Polarization: A Method for Constructing Capacity-Achieving Codes for Symmetric Binary-Input Memoryless Channels," *IEEE Transactions on Information Theory*, vol. 55, no. 7, pp. 3051–3073, 2009. Perspectives and Future Work

- Overall complexity assessment:
 - Sorting.
 - VN Processing.
 - Routing.
 - Memory allocation.
- Hardware Implementation of proposed algorithms.
- Comprehensive complexity-performance study of non-binary polar and binary polar decoders over non-binary modulation.
- Extend study area to include SC List Decoding for NB Polar codes.
- Non-binary turbo codes.. a vague journey?
